

HAMID KAMAL

India (Remote) | [LinkedIn](#) | [GitHub](#) | [Portfolio / CNC](#)

THE MISSION

17-year-old developer and entrepreneur specialized in building things that shouldn't be possible in a browser. Whether architecting AI-powered CAD engines for industrial machinery or conducting deep-dive security research to harden digital infrastructures, my focus is on creating elite, production-ready solutions. Bridging the gap between high-level software architecture and hardware control, with a "Red Team" security mindset.

CORE VENTURES (CO-FOUNDER)

CNC Jugaaadi / Design Swiftly

Feb 2026 – Present

Co-Founder & Lead Developer

- Architected **Design Swiftly**, a browser-based CAD/CAM suite that controls CNC machines via the Web Serial API.
- Integrated Gemini 2.0 Flash to enable natural language commands for complex vector design and command palette execution.
- Developed high-performance 3D material removal simulation and real-time G-Code toolpath generation.

Learn Quran

Sep 2024 – Present

Co-Founder & Lead Strategist

- Co-founded a global Islamic EdTech platform connecting madrasa teachers with students globally.
- Scaled a high-performance web architecture using Next.js and Node.js to handle international traffic.
- Drove global outreach and technical roadmap strategy to democratize access to Quranic education.

PROFESSIONAL EXPERIENCE

Amdox Technologies

Feb 2026 – Mar 2026

Web Development Intern

- Built enterprise-grade UI components for international clients, ensuring extreme performance and accessibility.
- Developed high-converting landing pages and optimized frontend performance using modern React patterns.

Syntecxhub

Jan 2026 – Feb 2026

Artificial Intelligence Intern

- Implemented RAG pipelines for automated document analysis, turning raw data into actionable AI insights.
- Fine-tuned lightweight LLMs for domain-specific automation tasks and integrated them into web platforms.

Codec Technologies India

Dec 2025 – Jan 2026

Artificial Intelligence Intern

- Developed real-time computer vision algorithms for object detection and automated data processing.
- Automated data preprocessing pipelines for large-scale AI training sets and deployed AI-powered chatbots.

TECHNICAL ARSENAL

Engineering: React 19, Next.js 15, Tailwind v4, TypeScript, Node.js, Web Serial API.

AI & Data: Gemini 2.0 Flash, RAG Pipelines, Prompt Engineering, Computer Vision.

Cybersecurity: Kali Linux, Ethical Hacking, Pentesting, Web Security, Vuln Research.

Tools: Git, Docker, Kubernetes, AWS, PostgreSQL, Prisma, Drizzle.

ELITE CREDENTIALS

Inside the Mind of a Hacker – **HackerOne**

Teaching AI Fluency – **Anthropic**

Software Engineering Simulation – **Quantium**

Cybersecurity Specialization – **IBM**

Google Cloud Foundations – **Google**
